

CSC 345 - Project #2: Discussion Log

When `git log --oneline > log.txt`, a text file containing all the commits pushed onto github since the creation of the repository are found. Below is the log.txt file created, the top being the most recent, going to the bottom to the oldest commits.

b6853b4 added discussion.pdf
78ffa35 added report and essay pdfs
bf4781c Discussion.pdf
ab9f2d9 AI Use Essay
f1c5146 Project 2 Report
205fdfb Makefile, main.c, and README.md are all complete.
3983929 Final Updates to main.c
bf4bda9 Multithreaded Suduko Puzzle Main File and Makefile Complete!
fdcf2e6 updated Makefile to run both methods
391e131 lol nevermind going to do stastical experiment without adding in a 3rd mode.
d38be50 preparing for stastical experiment by adding a 3rd if branch to get 50 times from each method.
1bffdfd timing added to both methods and correctly working for both.
5a0e6b1 timing working in method 1. adding to method 2 now.
f6b2475 testing timing implementqtion
e8cb334 added error branch incase a user gives an argument that isn't 1 or 2.
abd0ac9 working method 2 implemented and tested in main function
83407c2 method 1 (11 threads) implemented and working in the main function.
9204ead created functions to check rows and columns for 27 threads
4cf80da updated check cols function for 11 threads
95ce811 updated check rows function for 11 threads
7728ee8 adding second method (27 threads) and setting up clock
ea23a47 fixed arguments of main function
a22e943 updated main function and now working when running. properly showing the grid in the output along with showing a solution can be found.
3fd3480 updated functions to check rows, columns, and 3 by 3 grids.
fea6c16 Check 3 by 3 grid function is added to the main function
5c19fda check columns function created and tested in main
bd180f7 commented out check rows in main function
d9b6fa7 Merge branch 'main' of https://github.com/halls6/Project_2_CSC345
f31023c testing remove command
714e5c0 no yay
b542f1e hi

86380be Created pdf files
 bb851ee Edited README
 afd0d6a Added bullets to split
 cfe83f5 Added work split to README
 1f28ef0 Check rows function created and tested
 8fcce88 struct and results array added
 0f35321 Adjusted main function and added pthread library
 8345b64 Header added to print board function
 79625e9 Created and test function to print the board in main.c
 f576a3d Testing function to read in board from input.txt into main.c
 a3e33b1 Reformatted suduko input
 308c45a Loaded Figure 4.26 suduko board into input.txt
 31930cb Created input.txt
 52fe5df Simple Makefile outline
 6762d9e Created Makefile
 8974774 Layout of main.c
 d2efd9a Created main.c
 de6a202 Set up README
 ed78f9b Initial commit

Below are also pictures of the commits from the view of our git repository.

Edited README halls6 committed 9 hours ago	bb851ee		<>

Commits on Mar 23, 2026

Added bullets to split halls6 committed 19 hours ago	afd0d6a		<>
Added work split to README halls6 committed 19 hours ago	cfe83f5		<>

The commits above indicate the progress of the assignment as the different stages of the project are completed. These stages include input processing, creating the two threading methods, implementing timing, and formatting the output. Although the commits are almost entirely attributed to Sofia Hall's GitHub account, both team members were involved in designing, writing, testing, and debugging the program as it developed. The team both worked on it together, on the same computer, using Hall's GitHub account, which is why nearly all the commits are attributed to her. The range of commit messages, from implementing the core functionality through to testing, measurement, and performance optimizations, reflects the work undertaken by the team and is a sign of success.
